Make sure you open Doceri Desktop on your computer.

This window will open on your desktop. You should be able to see your computer on your iPad once this window opens.

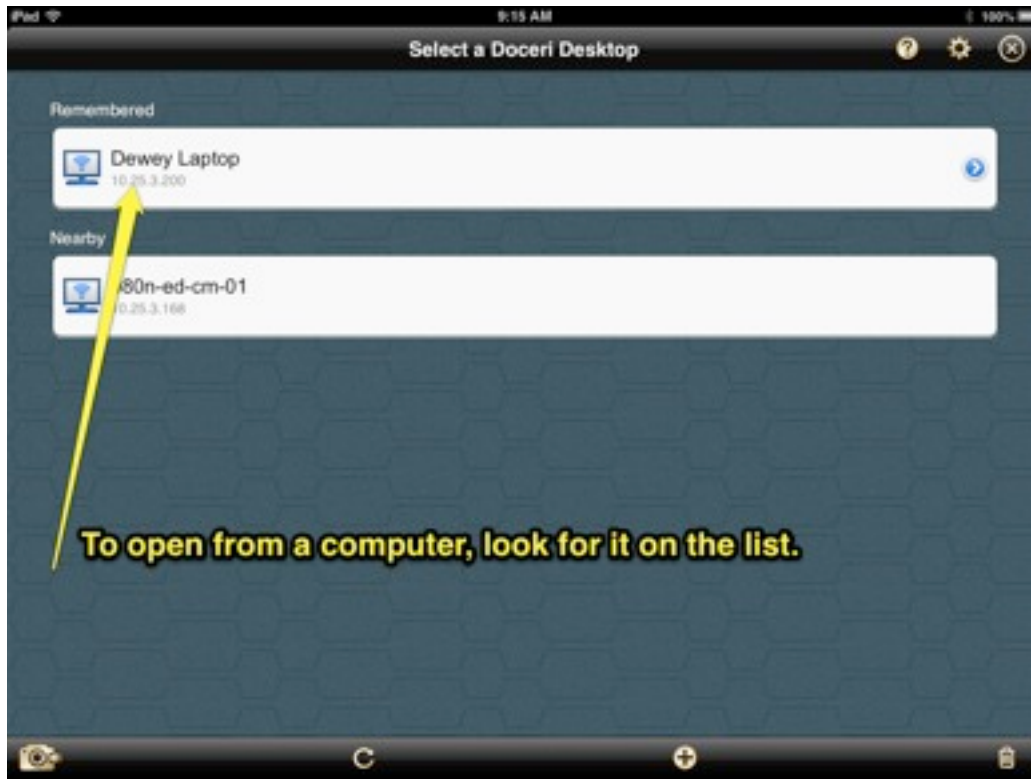

If you are using Doceri with your computer, you will need Doceri Desktop.
This will enable you to control your computer with your iPad.

To access Doceri through your computer via Doceri Desktop, select this option on your iPad from the **Doceri App**.

If your computer does not appear on the list, use the iPad camera to scan the QR code on the desktop connection dashboard shown above.

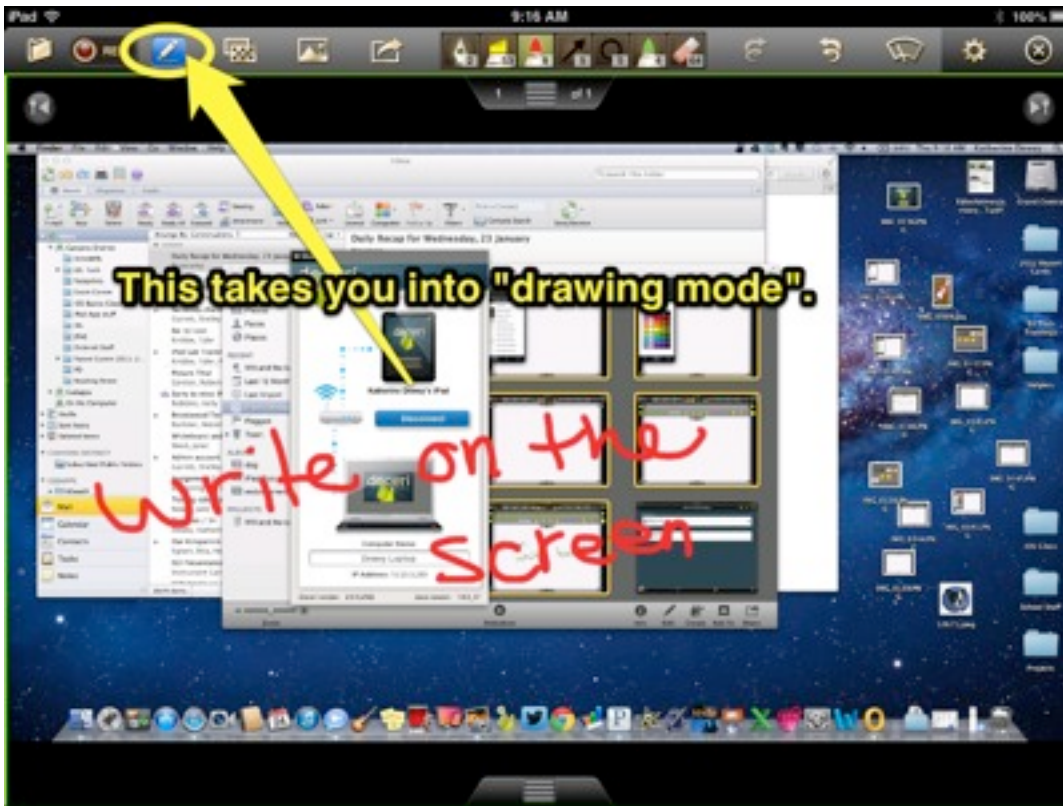

Otherwise, click your computer on the list!

You are now seeing your computer screen on your iPad. In this mode you can click through programs and use your iPad as a remote mouse.

The Blue Pen button allows you to enter "drawing mode". In this mode, you can draw or write on the screen.

You cannot navigate to other pages while in drawing mode.

The user can also turn on a background (there are many to choose from) by clicking the button with the checked box.

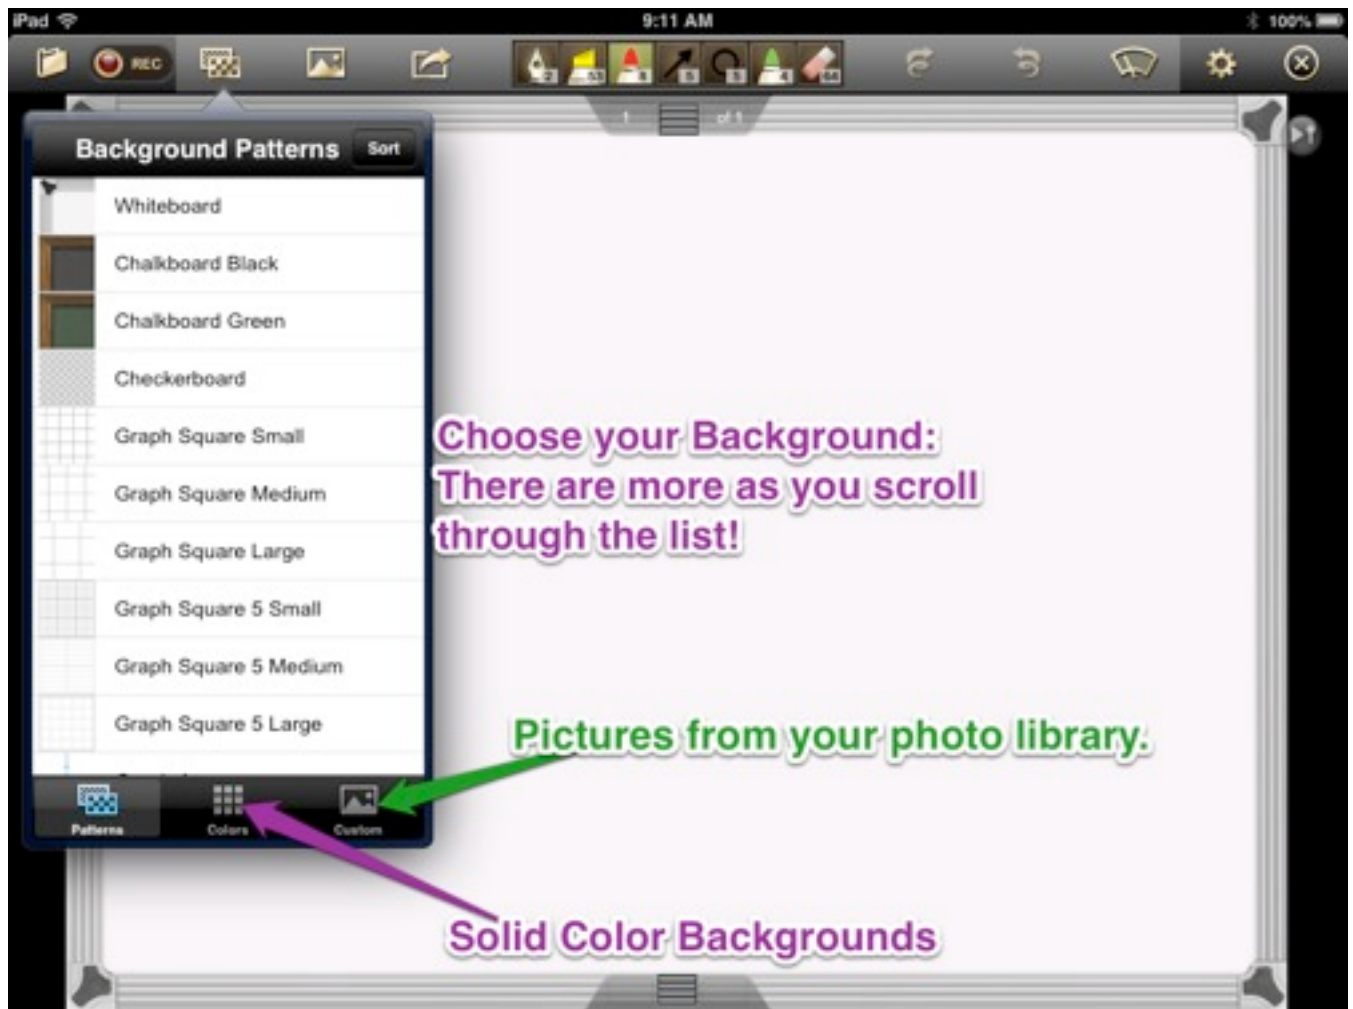

**Note, all drawings can be accessed again by touching the folder in the upper right hand corner.

This screen shot outlines some of the functions found in the drawing mode. The wrist guard noted above can help the user to not accidentally make marks with the wrist. It's a good idea to use with students or anyone not used to using a stylus on an iPad screen.

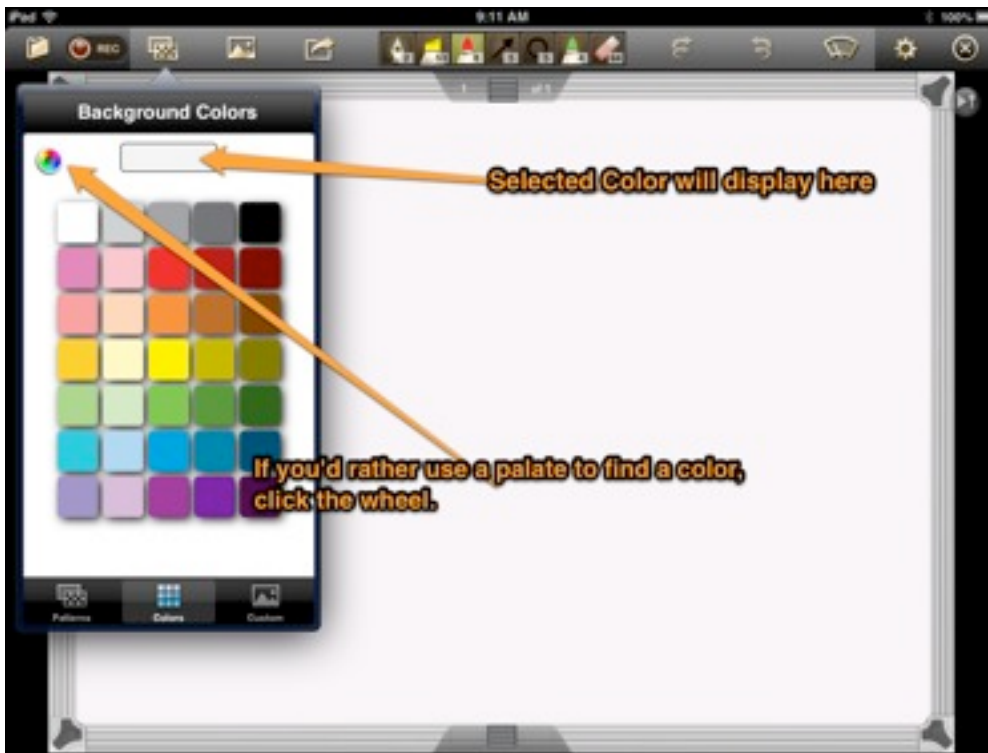

Undo and Redo will take away or rewrite writing stroke by stroke. The windshield wiper will clear the entire slide. The gray pin at the upper right hand corner will create a new slide without erasing the current slide. The opposite gray pin in the upper left corner will take you back to the previous slide.

Here are the backgrounds to choose from in the whiteboard. Be sure to scroll through the pattern list to see all the amazing options you can use for a background!

This is the Background color option, you can change how you view the colors by clicking the wheel. This will change from a whiteboard to whatever color you choose to have as a background.

This is the "time line" bar. You can access it easily by putting your finger on the tab and move it downward.

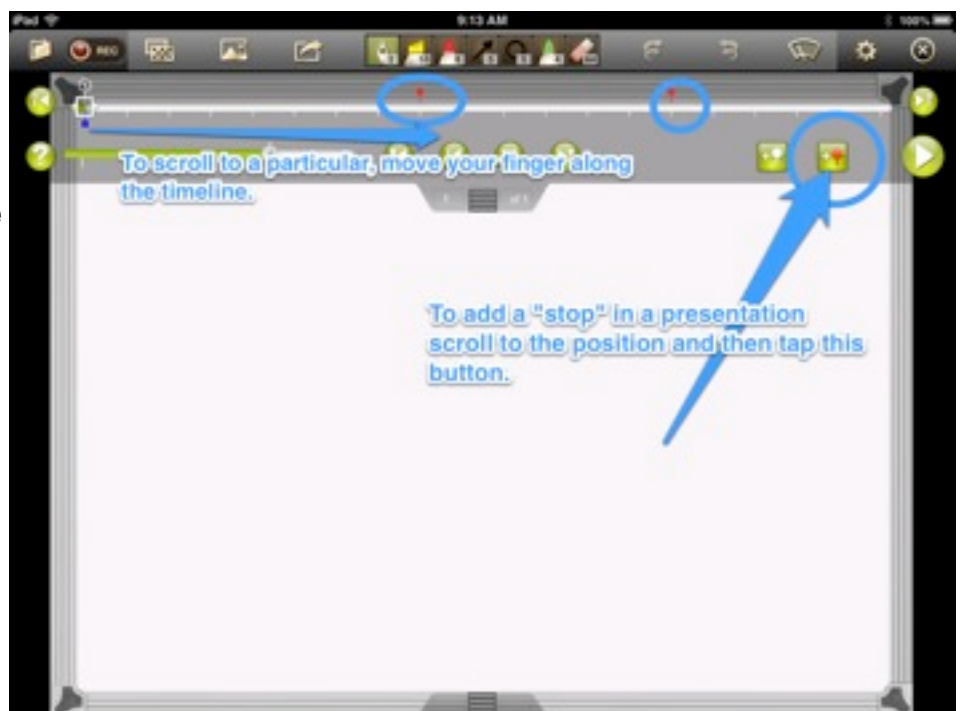

The time line is a great feature found on the Doceri Whiteboard. In preparing presentations, the user can replay all strokes by pressing the play button below. You can use the speed controls to alter how quickly the writing appears. This is a great feature to use with students!

These are the controls found on the time line.

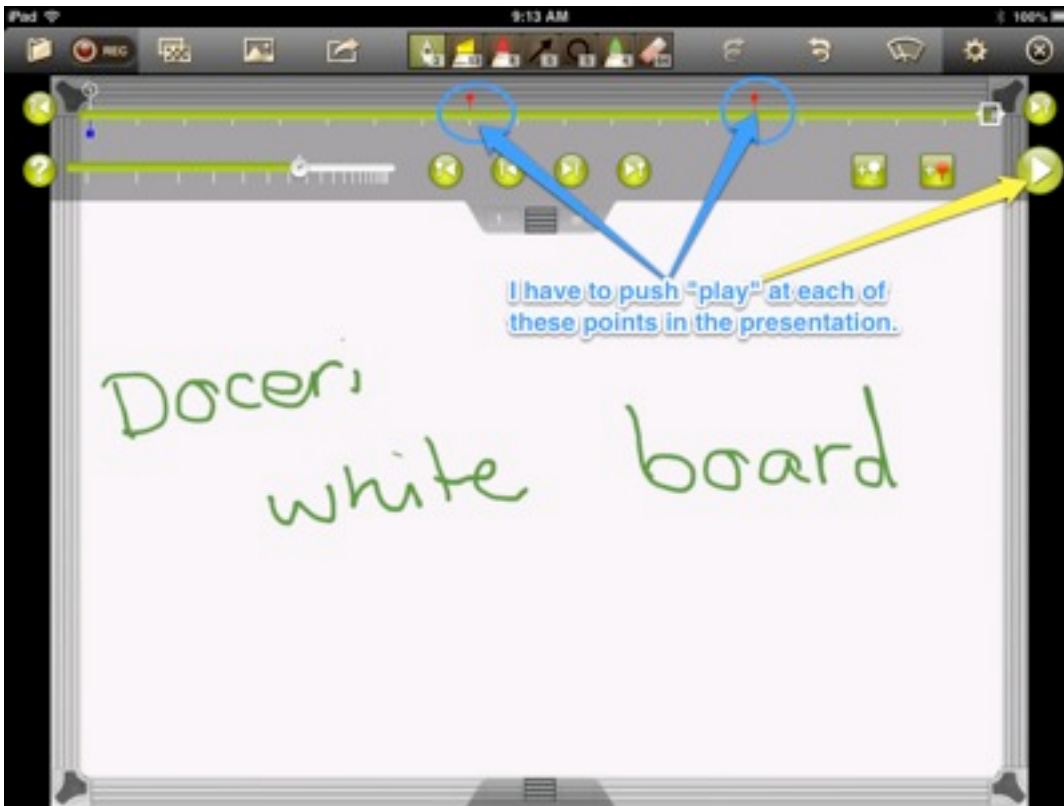

Moving your finger along the time line will allow you to move forward or rewind your presentation.

The red “stop” pins will stop the presentation at that point until “play” is pressed again. See the next screen shot for more details.

The red “stop” pins will stop the presentation at that point until “play” is pressed again.

The stops can be a great tool in controlling the presentation.
